Dr Prakash Saha’ publications

Cathelicidins prime platelets to mediate arterial thrombosis and tissue inflammation.

Radiation Induced DNA Damage in Operators Performing Endovascular Aortic Repair.

Human venous valve disease caused by mutations in FOXC2 and GJC2.

Cancer-Associated Thrombosis: Regulatory Mechanisms and Emerging Directions.

Increased Vascular Permeability Measured With an Albumin-Binding Magnetic Resonance Contrast Agent Is a Surrogate Marker of Rupture-Prone Atherosclerotic Plaque.

Optimal diagnostics of residual stenosis after lysis.

Contemporary management of acute and chronic deep vein thrombosis

Saha P, Black SA, Breen K, Modarai B, Smith A

Blood Oxygenation Level-Dependent CMR-Derived Measures in Critical Limb Ischemia and Changes With Revascularization.

J Am Coll Cardiol. 2016 Feb 2;67(4):420-31

Assessment of Venous Thrombosis in Animal Models.

Arterioscler Thromb Vasc Biol. 2016 Feb;36(2):245-52. (Corresponding author)

Quantification of experimental venous thrombus resolution by longitudinal nanogold-enhanced micro-computed tomography.

Regulation of sterile inflammation in the natural resolution of venous thrombosis.
Suha P, Smith A.

Postsurgical Inflammation as a Causative Mechanism of Venous Thromboembolism.
Albayati MA, Grover SP, Saha P, Lwaleed BA, Modarai B, Smith A.

Comparative Efficacy and Safety of Different Antiplatelet Agents for Prevention of Major Cardiovascular Events and Leg Amputations in Patients with Peripheral Arterial Disease: A Systematic Review and Network Meta-Analysis.

The soluble urokinase plasminogen activator receptor and its fragments in venous ulcers.

Changing paradigms in the management of deep vein thrombosis.
Lang KJ, Saha P, Roberts LN, Arya R.

Rossi SH, Patel A, Saha P, Gwozdz A, Salter R, Carrell T, Abisi S, Modarai B.
Neuroprotective strategies can prevent permanent paraplegia in the majority of patients who develop spinal cord ischaemia after endovascular repair of thoracoabdominal aortic aneurysms.

Angulation of the C-Arm During Complex Endovascular Aortic Procedures Increases Radiation Exposure to the Head.

Medium-Term Outcomes Following Endovascular Repair of Infrarenal Abdominal Aortic Aneurysms with an Unfavourable Proximal Neck.
Cardiovasc Intervent Radiol. 2014 Dec 24

Assessment of tissue perfusion in the lower limb: current methods and techniques under development.

Local accumulation of hypoxia-inducible factor 2 alpha during venous thrombus resolution.

Suppression of angiogenic response in local vein wall is associated with reduced thrombus resolution.
Thromb Res. 2014 Sep;134(3):682-5
Angiogenic cell therapy for critical limb ischemia: an update on concepts and trials.

Fibrin-Targeted Magnetic Resonance Imaging Allows In Vivo Quantification of Thrombus Fibrin Content and Identifies Thrombi Amenable for Thrombolysis.

Comparison of delayed-enhanced and black-blood MRI for the assessment of vascular remodeling in atherosclerosis using a rabbit model
Phinikaridou A, Andia ME, Smith A, Saha P, Botnar RM.

Anti-angiogenic therapy inhibits venous thrombus resolution

Magnetic resonance T1-relaxation time of venous thrombus is determined by iron processing and predicts susceptibility to lysis
Circulation 2013 Aug 13;128(7):729-36

A 14-year Experience with Aortic Endograft Infection: Management and Results.
Lyons OT, Patel AS, Saha P, Clough RE, Price N, Taylor PR.

In vivo magnetization transfer and diffusion weighted MRI detects thrombus composition in a mouse model of deep vein thrombosis.
Phinikaridou A, Andia ME, Saha P, Modarai B, Smith A, Botnar RM.

TIE2-expressing monocytes/macrophages regulate revascularization of the ischemic limb.

Quality improvement framework for major amputation: are we getting it right?
Krysa J, Fraser S, Saha P, Fuller M, Bell RE, Carrell TW, Modarai B, Taylor PR, Zayed HA.

HIF1 signalling regulates venous thrombus resolution.

Opinions on mouse models of thrombosis.
Evans CE, Humphries J, Saha P, Smith A.

Protein fragments from the VEGF binding domain of fibronectin are expressed in distinct spatial and temporal patterns during venous thrombus resolution.

Encapsulation of angiogenic monocytes using bio-spraying technology.

Adenoviral delivery of constitutively active HIF1alpha into venous thrombus.

Thoughts on murine models of deep vein thrombosis.
Evans CE, Humphries J, Saha P, Smith A.
Arterioscler Thromb Vasc Biol., 2012, 32(3),

Endovascular management of stanford type A dissection or intramural hematoma with a distal primary entry tear.

Upregulation of hypoxia-inducible factor 1 alpha in local vein wall is associated with enhanced venous thrombus resolution.

Techniques of assessing hypoxia at the bench and bedside.

Leukocytes and the natural history of deep vein thrombosis: current concepts and future directions.

Toward a functional characterization of blood monocytes.
Saha P, Geissmann F.
Immunology and Cell Biology 2011 Jan;89(1):2-4.

Hyoxia and Upregulation of Hypoxia-Inducible Factor 1α Stimulate Venous Thrombus Recanalization

Renal Transplantation after excision of the inferior vena cava for residual renal cell carcinoma
Ahmad A, Saha P, Modarai B, Burnand KG
Phlebology; (2010); 25(2):100-2.

The monocyte/macrophage as a therapeutic target in atherosclerosis
Saha P, Modarai B, Humphries J, Mattock K, Waltham M, Burnand KG, Smith A.

Molecular genetics of Abdominal Aortic Aneurysm – Therapeutic Implications
Chinien G, Waltham M, Saha P, Burnand KG, Smith A.
Complications following Endoluminal Stent Grafting of a Thoracic Mycotic Aneurysm

Saha P, Patel SD, Waltham M, Burnand KG.
