

Clonazepam for restless legs syndrome

The leaflet aims to answer your questions about taking clonazepam to treat your restless legs syndrome (RLS). If you have any questions or concerns, please speak to a doctor or nurse caring for you.

What is clonazepam?

Clonazepam belongs to a group of medicines called benzodiazepines. Clonazepam is usually used to treat epilepsy but can also be used to treat the symptoms of RLS. This is due to its muscle relaxing activity. Clonazepam causes a calming effect on the brain which may help to control body movements. This action can help to reduce the severity of symptoms.

Taking an unlicensed medicine

The use of clonazepam for treating RLS is unlicensed, which means that the manufacturer of the medicine has not specified it can be used in this way. However there is evidence that it works to treat this particular condition. The leaflet, **Unlicensed medicines – a guide for patients**, has more information about unlicensed medicines. If you would like a copy, please ask your doctor, nurse or pharmacist. Alternatively you can call the Pharmacy Medicines Helpline – contact details are at the end of this leaflet.

How do I take the medicine?

For the treatment of RLS, clonazepam should be taken once a day just before bedtime. Clonazepam can be taken with or without food. Swallow the tablet(s) with a drink of water. Keep taking the tablets until your doctor tells you otherwise. Stopping suddenly can cause problems and your doctor will want you to reduce your dose gradually if you need to stop treatment.

What should I do if I forget to take the medicine?

If you forget to take the dose before you fall asleep, do not worry. Take the next dose when it is due. **Do not take an extra dose the following evening to make up for a missed dose.**

Are there any side effects?

The following are examples of some of the side effects reported by patients taking clonazepam.

For further information on side effects, please see the manufacturer's leaflet that comes with the medicine.

Side effect	What should I do if it happens?
Common (between one in 100 and one in 10)	
Feeling sleepy, weak, or light-headed (these can continue into the following day)	Take dose immediately before bedtime. Do not drive and do not use tools or machines. Do not drink alcohol.
Feeling unsteady, poor co-ordination, unusual eye movements, poor concentration, feeling forgetful or confused	If any of these become troublesome, discuss them with your doctor.
Uncommon (between one in 1,000 and one in 100)	
Mood changes, changes in behaviour	If this becomes troublesome, speak with your doctor.

If any of the side effects persist or become a problem, please contact your GP/consultant or pharmacist for advice.

Is there anything else I need to know?

Clonazepam can make you feel sleepy, especially when you first start treatment.

Do not drink alcohol while you are taking clonazepam. Mixing alcohol with clonazepam may be dangerous as it can reduce your breathing rate, and it increases the risk of other side effects.

Clonazepam can lead to the development of dependence. This means that your body becomes dependent on the medicine and you may experience symptoms such as sweating, tremor, restlessness and agitation amongst others. If you are concerned about this, you should discuss it with your doctor.

If you are a driver, please be aware that clonazepam may affect your reactions and ability to drive. It is an offence to drive while your reactions are impaired. Even if your driving ability is not impaired, if you drive, you are advised to carry some evidence with you which shows that the medicine has been prescribed for you – a repeat prescription form or the patient information leaflet from the packet is generally considered suitable.

If you are due to have an operation or any dental treatment, please tell the person carrying out the treatment that you are taking clonazepam, as it increases the effects of some anaesthetics.

Clonazepam should be kept out of reach of children. If anyone other than you takes this medicine, you, they, or their parent/carer should contact NHS 111 for advice. If they are unwell, they should call for an ambulance.

The expiry date is printed on the container. Do not use the medicine after this date. The remainder should be returned to your local pharmacy to be discarded.

Pregnancy and breastfeeding:

We do not recommend the use of this medicine if you are pregnant or breastfeeding. You should let your consultant know if you are planning a pregnancy so that a management plan can be agreed. If you discover that you are pregnant, please contact your consultant for advice as soon as possible.

Sleep hygiene: Taking clonazepam is not a replacement for a good sleep routine. It is still important to aim to get around seven to eight hours of sleep at night if possible. It is advisable to go to bed when tired, and get up at about the same time each day.

Can I take clonazepam with other medicines?

Clonazepam may interact with some medicines. It is important to let us know about any medicines that you are currently taking, so that we can check clonazepam is suitable for you. If you are buying any medicines over the counter from a pharmacy, always mention that you have been prescribed clonazepam. It is safe to take ibuprofen or paracetamol with this medicine. Seek advice from a pharmacist when buying herbal or homeopathic remedies.

How will my treatment be reviewed?

Your treatment will be reviewed on an ongoing basis and the dose adjusted in response to your symptoms.

How do I get a repeat prescription?

Your GP will give you a repeat prescription for clonazepam, which you can take to your local pharmacy for supply. Please make sure you request your repeat prescription early enough to prevent your supply running out or risking missing any doses of your medication.

Useful sources of information

RLS-UK Supporting people with restless legs syndrome, [w: www.rls-uk.org/](http://www.rls-uk.org/)

You might find this charity's website useful for connecting with patients who suffer from the same condition as you, but any new information found should not alter your current treatment programme, and you should discuss any new advice with the doctor caring for your condition.

Contact us

If you have any questions or concerns about your sleep disorder please contact the Sleep Disorder Centre, **t:** 020 7188 3430, Monday to Friday, 9am to 5pm.

Out of hours:

Please leave a message and a member of staff will call you back in working hours; alternatively please contact your GP or NHS 111.
