

Central slip repairs static splinting regime: initial appointment

Your tendon(s) are becoming stronger but are still not fully healed. It will take a further six weeks before you can return to unrestricted activities.

This leaflet sets out some exercises you should do regularly each day to help your tendon(s) to heal. It also tells you what you should and should not do. If you need further information or advice, please do not hesitate to call your hand therapist.

Exercises

Complete these exercises _____. Repeat each exercise _____ times.

Definitions:

Actively = moving a finger joint by yourself without help from your other/unaffected hand.

Passively = using your other/unaffected hand to move a joint.

1. **Actively** bend the tip of your finger, supporting the middle joint in the splint.

2. **Actively** bend all the big knuckles of your hand together, making a 'duckbill'.

Do

- ✓ Keep your arm/hand in the air to minimise swelling.
- ✓ Lift your arm above your head regularly to maintain shoulder movement.
- ✓ Bend and straighten all unaffected joints regularly to maintain movement.
- ✓ Contact your therapist straight away if there are any problems with your splint.
- ✓ Keep your splint on at all times for the next four weeks.

Do not

- ✗ Use your injured finger.
- ✗ Remove your splint. It is there to protect your hand.
- ✗ Drive until your therapist tells you it is safe to do so. You should check with your insurance company to make sure you are covered to start driving again.

If you do not follow this advice, you risk damaging the repaired tendon(s).

Contact us

If you have any questions or concerns, please contact the Hand therapy department.

t: 020 7188 4172 or 020 7188 4174, Monday to Friday, 8am to 5pm
